Project Monitoring System

Soumya Kadingula
@soumy1508 on GitHub

Description

- This software is used to Monitor the activities in the Project.

- This software allows you to create and manage multiple projects simultaneously.

- Tasks will be created under each project and team members will be assigned to each tasks.

- With the help of my software the Executive Management can make effective decisions in planning and reduce costs.

Features

- Create a new project and start configuring it.
- Create tasks for project and assign task to Team Members.
- We can generate reports based on tasks, projects.

Planning - User Stories

As a User, I should see the list of projects created, user should be able to create a project and its properties, user should able to search for a particular project that user want, user should able to delete the project that created in the database, user should able to update properties for a project, user should able to create tasks for the project.

Planning - Database

- PMS database has

➤ projects table is the primary table.

➤ Tasks table contains foreign key mapping to the primary table.

➤ users table.

Technology Stack

- C#
- ASP .Net MVC
- Visual Studio 2017
- SQL Server Database
- GitHub

Demo

What I Learned

- Wire Frames.
- User stories.
- MVC framework.
- GitHub

What's Next

- Adding a feature for a user to log in via facebook.
- I'm learning new as how to generate reports and save to excel.
